

Subject: Additives and Sealers on Mitsubishi Electric HVAC products

Mitsubishi Electric Sales Canada strongly recommends against using any additives and/or sealers on or in the installation of our HVAC systems due to the possibility of causing restrictions. In fact, any extraneous additive whether a sealer, dye, etc. could potentially cause problems with refrigerant flow in our system and is ***strongly not recommended.***

Should any problems arise due to addition or use of additives or sealers to the system the manufacturer's warranty could be voided at MESCA's discretion.

If you have questions or concerns, please contact your local distributor.

Thank you for your continued efforts.

Sincerely,

Mitsubishi Electric Sales Canada HVAC
