Note:

- To be installed by a trained and licensed refrigeration mechanic;
- Suitable for installation with an ANSI certified gas furnace (Z21.47/CSA2.3);
- Not suitable for installation with OIL or DRUM type furnaces;
- Supply air temperature must not exceed 200°F (93.3 °C);
- Furnace output capacity shall not be greater than 300% of the rated PAA cooling capacity;
- Configure furnace fan such that the airflow is greater than or equal to 350 CFM per ton and less than or equal to 400 CFM per ton of nominal PAA unit cooling capacity. In down flow orientation, the furnace fan should be configured to maintain an airflow face velocity below 350 ft/min to prevent water blow-off;
- For detailed requirements, review PAA Installation Manual at: <http://www.mitsubishitechno.ca/>
