# 1. SPECIFICATIONS

BC controller

Model			CMB-P104NU-J2	
Number of branch			4	
Power source			1 phase 208-230V 60Hz	
Power input	Cooling	kW	0.061/0.078	
	Heating	kW	0.030/0.039	
Current input	Cooling	A	0.30/0.35	
	Heating	A	0.15/0.18	
External finish			Galvanized steel plate (Lower part drain pan: Pre-coated galvanized sheets + powder coating)	
Connectable outdoor/heat source unit capacity			P72 to P120	
Indoor unit capacity connectable to 1 branch			Model P54 or smaller (Use optional joint pipe combining 2 branches when the total unit capacity exceeds P55.)	
External dimension H × W × D		mm	250 x 596 x 398	
		in.	9-7/8 x 23-1/2 x 15-11/16	
Refrigerant piping diameter	To outdoor/heat source unit		Connectable unit capacity	High press. pipe
	mm (in.) O.D.		P72	15.88 (5/8) Brazed
	mm (in.) O.D.		P96	19.05 (3/4) Brazed
	*11 mm (in.) O.D.		P120	19.05 (3/4) Brazed 22.2 (7/8) Brazed or 28.58 (1-1/8) Brazed
To indoor unit		Liquid pipe		Gas pipe
		mm (in.) O.D.		Indoor unit Model P18 or smaller 6.35 (1/4) Brazed bigger than P18 9.52 (3/8) Brazed Indoor unit Model P18 or smaller 12.7 (1/2) Brazed bigger than P18 15.88 (5/8) Brazed (19.05 (3/4), 22.2 (7/8) with optional joint pipe used.)
Field drain pipe size		in.	3/4 NPT	
Net weight		kg (lbs)	25 (56)	
Sound power level (measured in anechoic room)	Rated operation	dB <A>	59	
	Defrost	dB <A>	71	
Accessories			Details refer to External Drw	
Remarks			-	

Notes:

1. Installation/foundation work, electrical connection work, insulation work, power source switch, and other items shall be referred to the Installation Manual.
2. The equipment is for R410A refrigerant.
3. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors.  
(For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.)
4. Sound power level differs depending on the connected outdoor/heat source unit capacity or operation condition.  
The sound power level at the rated operation is the value of the cooling mode.
5. The sound power level values were obtained in an anechoic room. Actual sound power level is usually greater than that measured in anechoic room due to ambient noise and deflection sound.
6. The solenoid valve switching sound is 74 dB (sound power level) regardless of the unit model.
7. Refrigerant piping diameter for connection of plural indoor units with 1 branch shall be referred to the Installation Manual.
8. This unit is not designed for outside installations.
9. When brazing the pipes, be sure to braze, after covering a wet cloth to the insulation pipes of the units in order to prevent it from burning and shrinking by heat.
10. Indoor unit capacity connectable to 1 branch is changed depending on the indoor unit type and connection method. Please refer to the Installation Manual for more information.
11. For the refrigerant pipe size, refer to Installation Manual of outdoor units/heat source units.

Notes:

1. Installation/foundation work, electrical connection work, insulation work, power source switch, and other items shall be referred to the Installation Manual.
2. The equipment is for R410A refrigerant.
3. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors.  
(For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.)
4. Sound power level differs depending on the connected outdoor/heat source unit capacity or operation condition.  
The sound power level at the rated operation is the value of the cooling mode.
5. The sound power level values were obtained in an anechoic room. Actual sound power level is usually greater than that measured in anechoic room due to ambient noise and deflection sound.
6. The solenoid valve switching sound is 74 dB (sound power level) regardless of the unit model.
7. Refrigerant piping diameter for connection of plural indoor units with 1 branch shall be referred to the Installation Manual.
8. This unit is not designed for outside installations.
9. When brazing the pipes, be sure to braze, after covering a wet cloth to the insulation pipes of the units in order to prevent it from burning and shrinking by heat.
10. Indoor unit capacity connectable to 1 branch is changed depending on the indoor unit type and connection method. Please refer to the Installation Manual for more information.
11. For the refrigerant pipe size, refer to Installation Manual of outdoor units/heat source units.

Notes:

1. Installation/foundation work, electrical connection work, insulation work, power source switch, and other items shall be referred to the Installation Manual.
2. The equipment is for R410A refrigerant.
3. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors.  
(For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.)
4. Sound power level differs depending on the connected outdoor/heat source unit capacity or operation condition.  
The sound power level at the rated operation is the value of the cooling mode.
5. The sound power level values were obtained in an anechoic room. Actual sound power level is usually greater than that measured in anechoic room due to ambient noise and deflection sound.
6. The solenoid valve switching sound is 74 dB (sound power level) regardless of the unit model.
7. Refrigerant piping diameter for connection of plural indoor units with 1 branch shall be referred to the Installation Manual.
8. This unit is not designed for outside installations.
9. When brazing the pipes, be sure to braze, after covering a wet cloth to the insulation pipes of the units in order to prevent it from burning and shrinking by heat.
10. Indoor unit capacity connectable to 1 branch is changed depending on the indoor unit type and connection method. Please refer to the Installation Manual for more information.
11. For the refrigerant pipe size, refer to Installation Manual of outdoor units/heat source units.

1. Suspension bolt(ø10) and nut(M10) prepare in the field.
2. Take notice of service space as shown.  
(Please give attention not to occupy service space by letting ducts and pipes through.)
3. Please take service space for connection pipe of SUB BC CONTROLLER.
4. When using an outdoor unit-3.8HP(P950) or more, use this product.
5. Install this product in a location where noise (refrigerant noise) emitted by the unit will not disturb the neighbors.  
(For use in quiet environments with low background noise, position the BC CONTROLLER at least 5m away from any indoor units.)
6. Refer to the Installation Manual for refrigerant piping diameter size when connecting plural indoor units with 1 branch.
7. Refer to the Table-1-2 for connection pipe of outdoor unit or SUB BC CONTROLLER diameter size.
8. Refer to the Installation Manual for insulation of connection pipe and drain piping.
9. Do not place the BC controller directly on the floor.

## How to select Joint and Reducer

Outdoor/Heat source unit

BC controller

A	Branch joint	Between BC and indoor units	CMY-Y102SS-G2	Total down-stream indoor unit capacity: -P72
			CMY-Y102LS-G2	Total down-stream indoor unit capacity: P73-P96
B	Branch joint	Between Main BC and Sub BC	CMY-R201S-G	Total down-stream indoor unit capacity: -P126
			CMY-R202S-G	Total down-stream indoor unit capacity: P127-P216
			CMY-R203S-G	Total down-stream indoor unit capacity: P217-P234
			CMY-R204S-G	Total down-stream indoor unit capacity: P235-P360
			CMY-R205S-G	Total down-stream indoor unit capacity: P361-
C	Reducer	Between outdoor units and BC	CMY-R301S-G	For J2 type (Outdoor unit capacity: P72-P120)
			CMY-R302S-G1	For JA2 type (Outdoor unit capacity: P72-P336)
			CMY-R304S-G1	For KA2 type (Outdoor unit capacity: P72-P432)
		Between Main BC and Sub BC	CMY-R303S-G1	For JA2 type (When using the Sub BC controller)
			CMY-R305S-G1	For KA2 type (When using the Sub BC controller)
			CMY-R306S-G	For KB2 type

♦Item "B" is not necessary when J2-type BC controller is used.

## 6-2. JOINT KIT "CMY-R160-J1" FOR BC CONTROLLER

Joint kit "CMY-R160-J1" for BC controller is used to combine 2 ports of the BC controller at a PURY/PQRY system so as to enable down-stream Indoor capacity above P54 as shown in Fig. 1.

The Joint kit include following items:

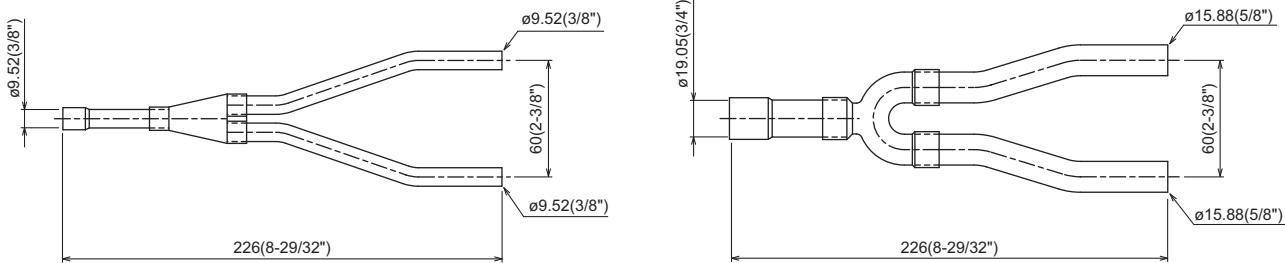

①Instruction	②Joint pipe(Small)	③Joint pipe(Large)	④Cover 1	⑤Cover 2	⑥Cover 3	⑦Band	⑧Reducer 1	⑨Reducer 2
This sheet 1pc	1pc	1pc	2pcs	1pc for gas side	1pc for liquid side	8pcs	OD19.05-ID22.2 1pc	OD19.05-ID15.88 1pc

Please prepare the following items in the field. ①Tape for insulation material sealing ②Extension pipe for refrigerant circuit

②Joint pipe (for liquid side)

③Joint pipe (for gas side)

mm (in.)

### 1. Designing CMY-R160-J1 to a PURY/PQRY system

The maximum down-stream Indoor capacity for 1 port of BC controller is P54. When the down-stream Indoor capacity is above P54, Joint kit CMY-R160-J1 is needed to combined 2 ports of BC controller to enlarge the capacity, like Group 2 and 3 in Fig. 1.

Maximum 3 Indoor units are allowed to connect to 1 port of BC controller or 2 combined ports of BC controller using CMY-R160-J1.

When connecting Indoor units to 1 port of BC controller or 2 combined ports of BC controller using CMY-R160-J1 or CMY-Y102SS-G2 is applicable, like Group 1 and 2 in Fig. 1

Caution: Mixed cooling and heating mode at the same time for Indoor units connecting to 1 port or 2 combined ports is not available.

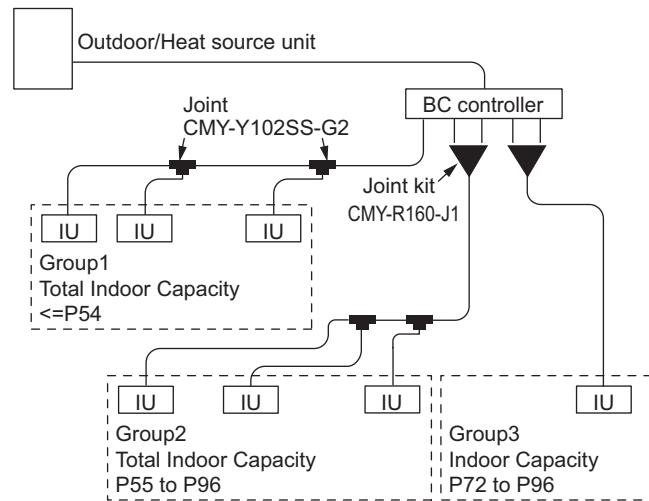

Fig.1. CMY-R160-J1 applying scheme

### 2. Piping at the installation site

The connection of CMY-R160-J1 to BC controller and pipe leading to Indoor units is referable to Fig. 2. Non-oxidized brazing is necessary. All piping must be careful to avoid foreign material getting inside.

After piping and air-tight testing, insulation work to the Joint and pipe should be done. Details is available at the Installation Manual.

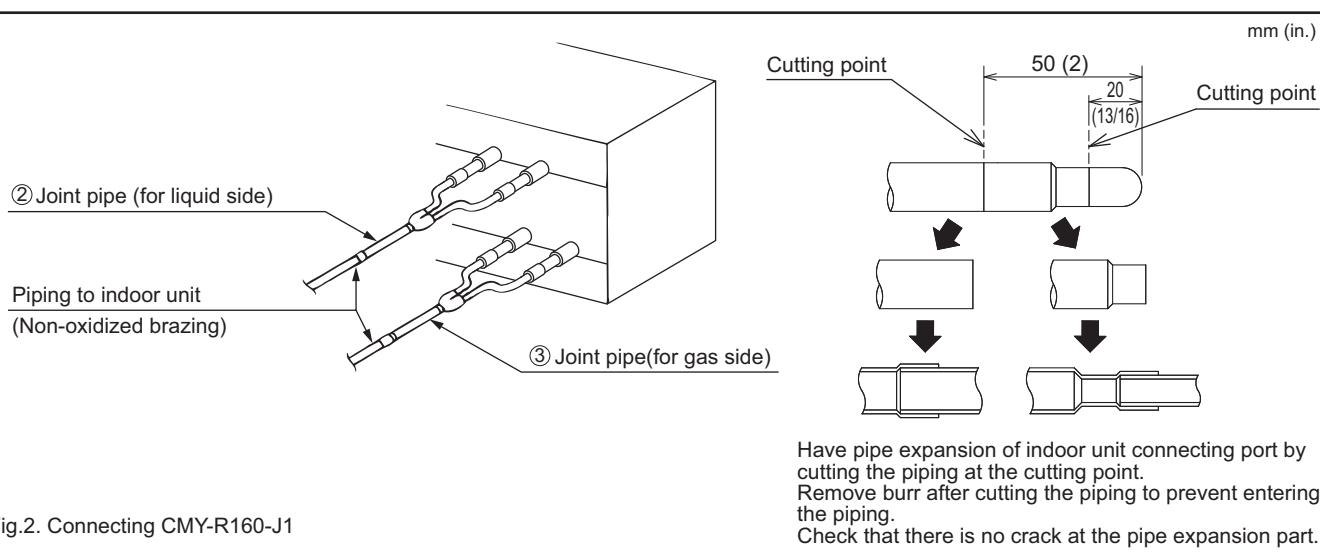

Fig.2. Connecting CMY-R160-J1

## 7-1. Installing BC controllers

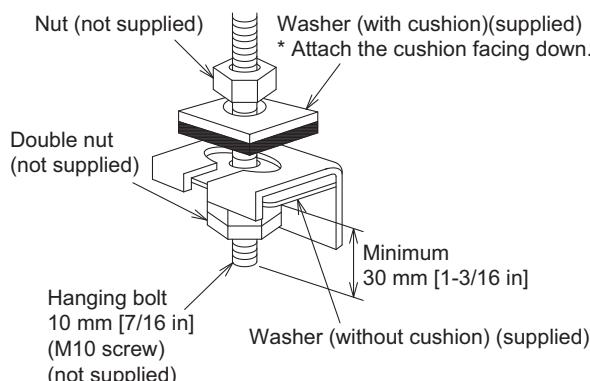

### Installing hanging bolts

Install locally procured hanging bolts (threaded rod) following the procedure given in the figure.

The hanging bolt size is 10 mm [7/16 in] (M10 screw).

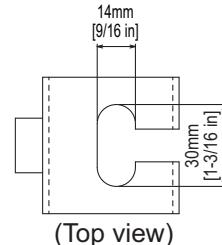

To hang the unit, use a lifting machine to lift and pass it through the hanging bolts.

Suspension bracket has an oval hole. Use a large diameter washer.

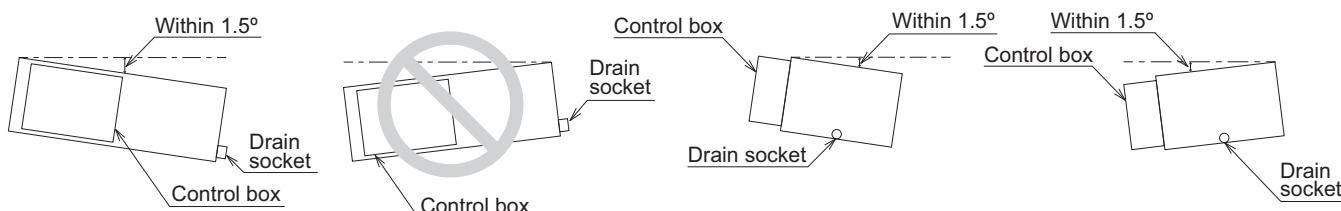

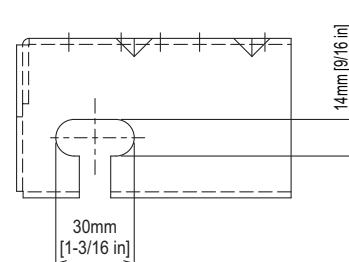

CMB-P104, 106, 108NU-J2,  
CMB-P104, 108NU-KB2

CMB-P1012, 1016NU-J2  
CMB-P108, 1012, 1016NU-JA2  
CMB-P1016NU-KA2

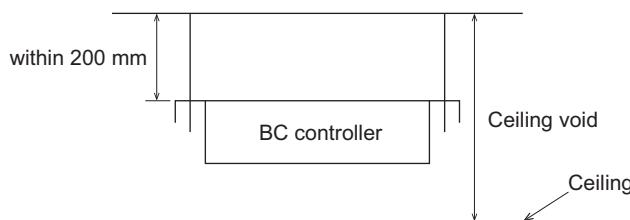

(Top view)

<Viewed from the front of the control box>

<Viewed from the drain socket side>

- ▶ Be sure to install the BC controller horizontally, using a level. If the controller is installed at an angle, drain water may leak out. If the controller is slanted, loosen the fixing nuts on the hanging brackets to adjust its position.
- ▶ Provide a downward pitch of 1.5° or below to the BC controller.
- ▶ Do not place the BC controller directly on the floor. Doing so may cause damage to the unit or the floor.
- ▶ Install the BC controllers with the hanging length within 200 mm [7-7/8 in] or shorter.

### ⚠ CAUTION

**Be sure to install the unit body level.**

	KB2 type			

\*Up to 11 Sub BC controllers can be connected.

GA(1)/HA(1)/GB(1)/HB(1) type and JA2/KA2/KB2 type can be mixed.

The only combination that is not available is mix of GB(1)/HB(1) type and KB2 type.

When mixing GA(1)/HA(1)/GB(1)/HB(1) type and JA2/KA2/KB2 type, specifications and restrictions are according to GA(1)/HA(1)/GB(1)/HB(1) type. (piping length, connectable number of Sub BC)

## 8-2. System examples

Refer to "6-1. JOINT and REDUCER" and "Piping Design of Outdoor/Heat source Units" for joint/reducer selection rules, pipe length restrictions, and pipe diameter.

### 8-2-1. When G1-type BC controller is used

Note1. No Header usable on PURY system.

Note2. Indoor unit sized P72-P96 should be connected to BC controller via Y shape joint CMY-R160-J1.

Note3. Indoor unit sized P72-P96 does NOT share BC controller ports with other Indoor units;

Note4. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better;

Piping length needs to consider the actual length and equivalent length which bents are counted.

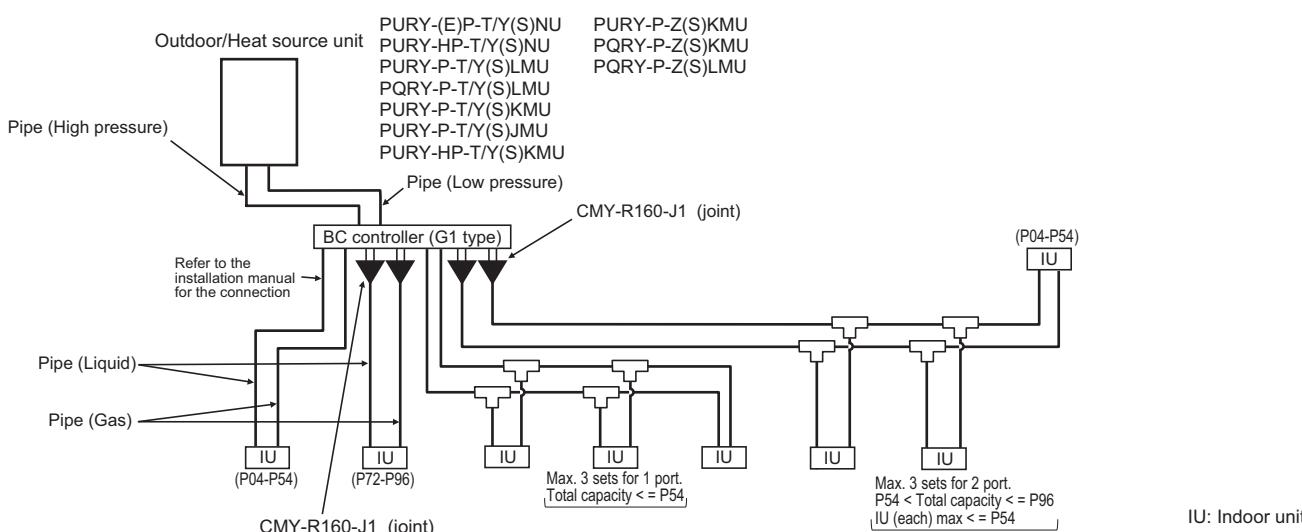

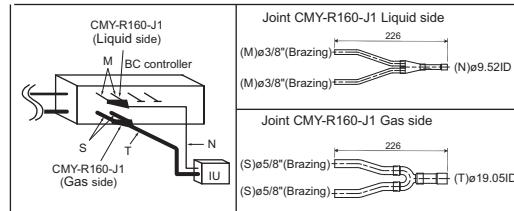

Equivalent piping length (m) = Actual piping length + "M" × Number of bent.

Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P72-P96 with 2 ports.

Note6. Do not connect multiple indoor units to the same port when operating each of them in different mode (cooling, heating, stop, and thermo-off). In case of connecting multiple indoor units to the same port, connecting all indoor units to one remote controller and switching SW1-1 ON in the all connected indoor units (switch to thermostat built in the remote controller) are recommended.

Note7. Indoor capacity is described as its model size. For example, PEFY-P24NMAU-\*\*, its capacity is P24.

Note8. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream. For example, PEFY-P24NMAU-\*\* + PEFY-P06NMAU-\*\*: Total Indoor capacity = P24 + P06 = P30.

### 8-2-2. When J2-type BC controller is used

Note1. No Header usable on PURY system.

Note2. Indoor unit sized P72-P96 should be connected to BC controller via Y shape joint CMY-R160-J1.

Note3. Indoor unit sized P72-P96 does NOT share BC controller ports with other Indoor units;

Note4. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better;

Piping length needs to consider the actual length and equivalent length which bents are counted.

Equivalent piping length (m) = Actual piping length + "M" × Number of bent.

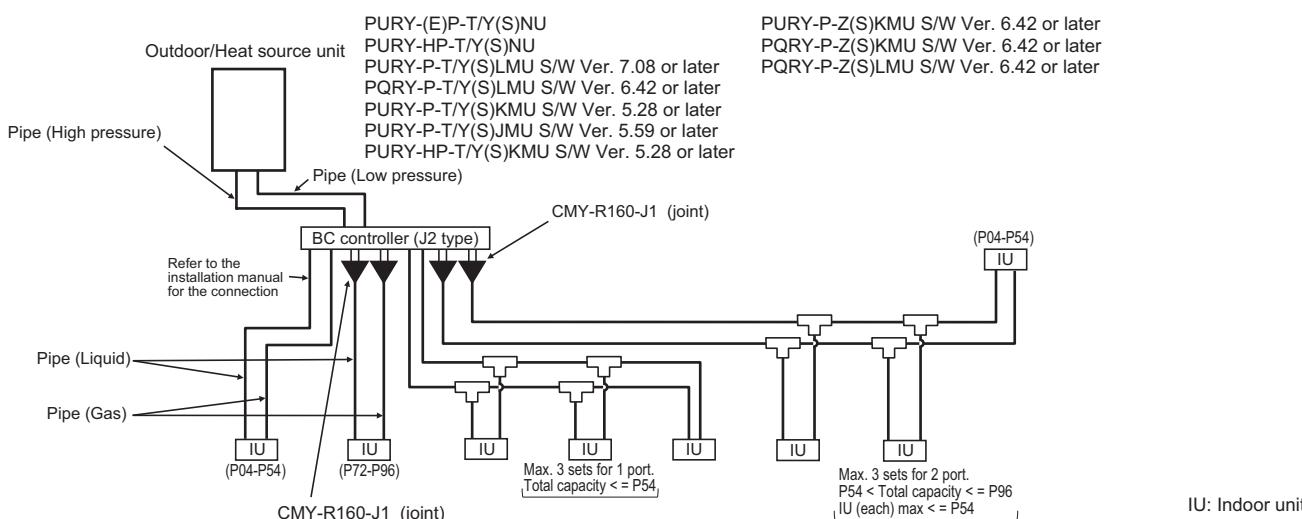

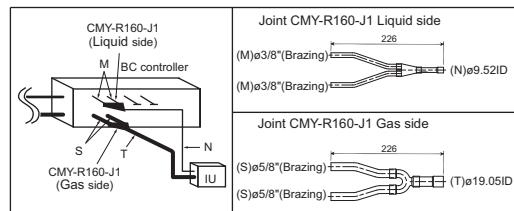

Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P72-P96 with 2 ports.

Note6. Do not connect multiple indoor units to the same port when operating each of them in different mode (cooling, heating, stop, and thermo-off). In case of connecting multiple indoor units to the same port, connecting all indoor units to one remote controller and switching SW1-1 ON in the all connected indoor units (switch to thermostat built in the remote controller) are recommended.

Note7. Indoor capacity is described as its model size. For example, PEFY-P24NMAU-\*\*, its capacity is P24.

Note8. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream. For example, PEFY-P24NMAU-\*\* + PEFY-P06NMAU-\*\*: Total Indoor capacity = P24 + P06 = P30.

Note9. To connect the BC controller to the main pipe, use the reducer (CMY-R301S-G).

### 8-2-3. When JA2/KA2- and GB1/HB1-type BC controllers are used together

Note1. No Header usable on PURY system.

Note2. Indoor unit sized P72-P96 should be connected to BC controller via Y shape joint CMY-R160-J1.

Note3. Indoor unit sized P72-P96 does NOT share BC controller ports with other Indoor units;

Note4. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better;

Piping length needs to consider the actual length and equivalent length which bents are counted.

Equivalent piping length (m) = Actual piping length + "M" × Number of bent.

Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P72-P96 with 2 ports.

Note6. Do not connect multiple indoor units to the same port when operating each of them in different mode (cooling, heating, stop, and thermo-off). In case of connecting multiple indoor units to the same port, connecting all indoor units to one remote controller and switching SW1-1 ON in the all connected indoor units (switch to thermostat built in the remote controller) are recommended.

Note7. For sub BC controller CMB-P-NU-GB1 the connectable indoor unit capacities may sum to equal that of a P126 unit or less.

However, if two sub controllers are used the TOTAL sum of connectable units connected to BOTH sub controllers must also not exceed that of a P126 unit.

For sub BC controller CMB-P1016NU-HB1 the connectable indoor unit capacities may sum to equal that of a P126 unit or less. However, if two sub controllers are used the TOTAL sum of connectable units connected to BOTH sub controllers must also not exceed that of a P168 unit.

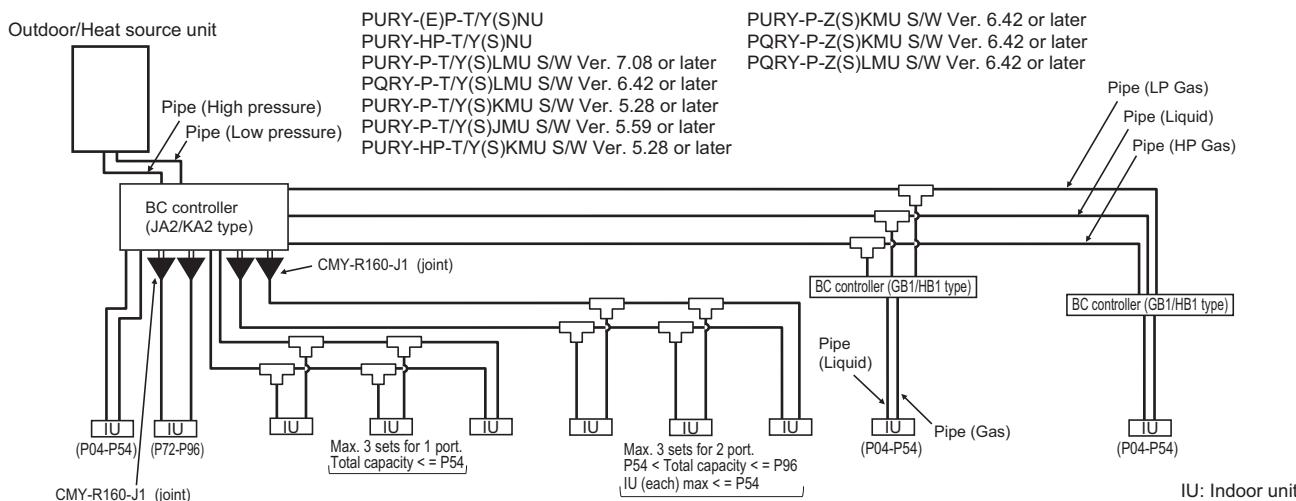

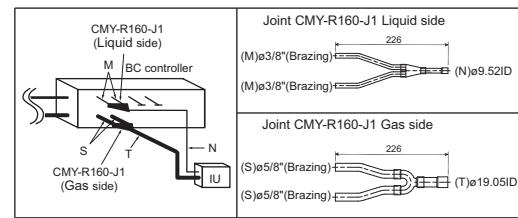

Note8. Indoor capacity is described as its model size. For example, PEFY-P24NMAU-\*\*, its capacity is P24.

Note9. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream. For example,

PEFY-P24NMAU-\*\* + PEFY-P06NMAU-\*\*: Total Indoor capacity = P24 + P06 = P30.

Note10. To connect the BC controller to the main pipe, use the reducer (CMY-R302S-G1 or CMY-R304S-G1).

Note11. To connect the sub BC controller to the main BC controller, use the reducer (CMY-R303S-G1, CMY-R305S-G1, or CMY-R306S-G).

### 8-2-4. When GA1/HA1- and KB2-type BC controllers are used together

Note1. No Header usable on PURY system.

Note2. Indoor unit sized P72-P96 should be connected to BC controller via Y shape joint CMY-R160-J1.

Note3. Indoor unit sized P72-P96 does NOT share BC controller ports with other Indoor units;

Note4. As bents cause pressure loss on transportation of refrigerant, fewer bents design is better;

Piping length needs to consider the actual length and equivalent length which bents are counted.

Equivalent piping length (m) = Actual piping length + "M" × Number of bent.

Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P72-P96 with 2 ports.

Note6. Do not connect multiple indoor units to the same port when operating each of them in different mode (cooling, heating, stop, and thermo-off). In case of connecting multiple indoor units to the same port, connecting all indoor units to one remote controller and switching SW1-1 ON in the all connected indoor units (switch to thermostat built in the remote controller) are recommended.

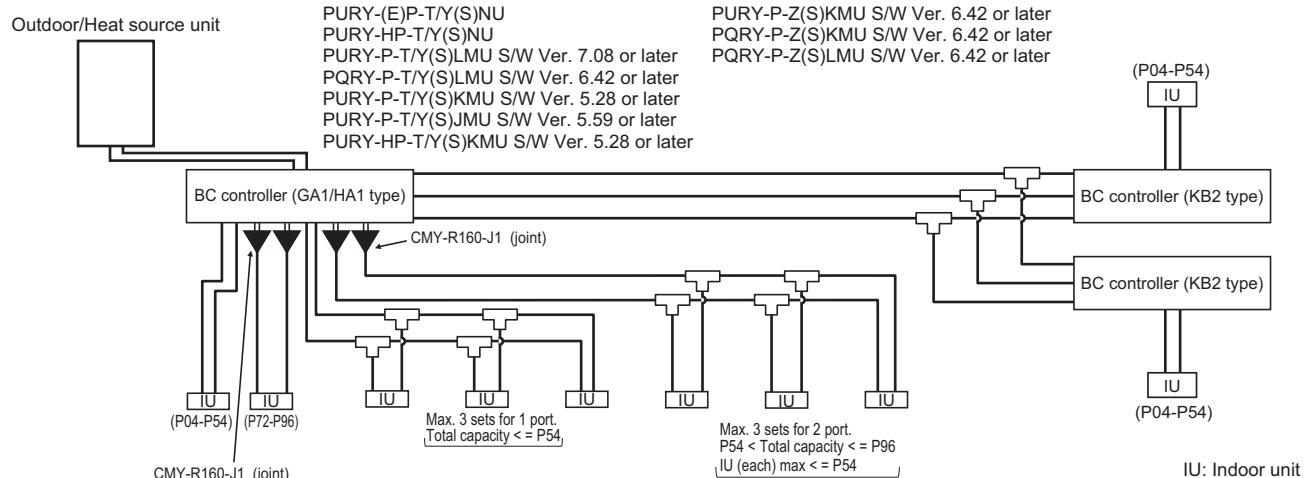

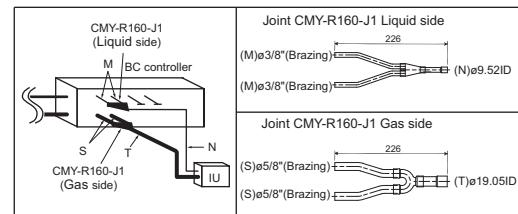

Note7. The maximum total capacity of indoor units that can be connected to each sub BC controller CMB-P-NU-KB2 is P126.

Note8. Indoor capacity is described as its model size. For example, PEFY-P24NMAU-\*\*, its capacity is P24.

Note9. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream. For example,

PEFY-P24NMAU-\*\* + PEFY-P06NMAU-\*\*: Total Indoor capacity = P24 + P06 = P30.

Note10. To connect the sub BC controller to the main BC controller, use the reducer (CMY-R306S-G).

## 8-2-5. When JA2/KA2- and KB2-type BC controllers are used together

Note1. No Header usable on PURY system.

Note2. Indoor unit sized P72-P96 should be connected to BC controller via Y shape joint CMY-R160-J1.

Note3. Indoor unit sized P72-P96 does NOT share BC controller ports with other Indoor units;

Note4. As bends cause pressure loss on transportation of refrigerant, fewer bents design is better;

Piping length needs to consider the actual length and equivalent length which bents are counted.

Equivalent piping length (m) = Actual piping length + "M" × Number of bent.

Note5. Set DIP-SW 4-6 to ON of BC controller, in case of connected Indoor unit sized P72-P96 with 2 ports.

Note6. Do not connect multiple indoor units to the same port when operating each of them in different mode (cooling, heating, stop, and thermo-off). In case of connecting multiple indoor units to the same port, connecting all indoor units to one remote controller and switching SW1-1 ON in the all connected indoor units (switch to thermostat built in the remote controller) are recommended.

Note7. The maximum total capacity of indoor units that can be connected to each sub BC controller CMB-P\*NU-KB2 is P126.

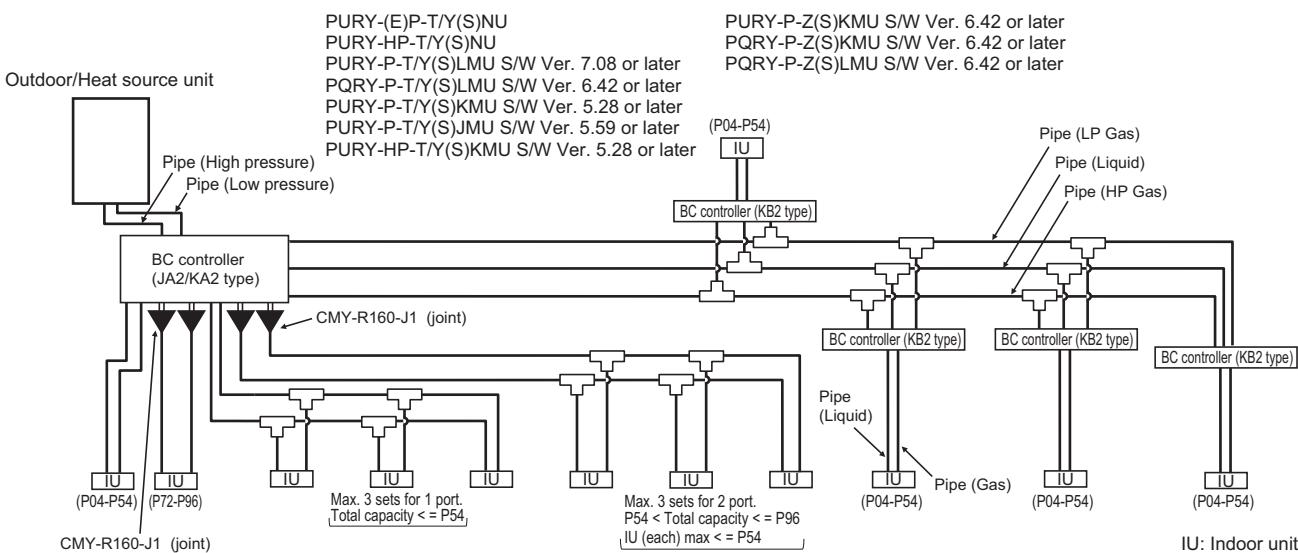

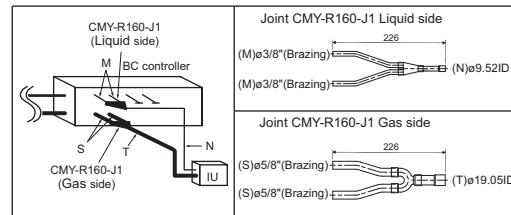

Note8. Indoor capacity is described as its model size. For example, PEFY-P24NMAU-\*\*, its capacity is P24.

Note9. Total down-stream Indoor capacity is the summary of the model size of Indoors down-stream. For example,

PEFY-P24NMAU-\*\* + PEFY-P06NMAU-\*\*: Total Indoor capacity = P24 + P06 = P30.

Note10. To connect the BC controller to the main pipe, use the reducer (CMY-R302S-G1 or CMY-R304S-G1).

Note11. To connect the sub BC controller to the main BC controller, use the reducer (CMY-R303S-G1, CMY-R305S-G1, or CMY-R306S-G).

**⚠ Warning**

- Do not use refrigerant other than the type indicated in the manuals provided with the unit and on the nameplate.
  - Doing so may cause the unit or pipes to burst, or result in explosion or fire during use, repair, or at the time of disposal of the unit.
  - It may also be in violation of applicable laws.
  - MITSUBISHI ELECTRIC CORPORATION cannot be held responsible for malfunctions or accidents resulting from the use of the wrong type of refrigerant.
- Our air conditioning equipment and heat pumps contain a fluorinated greenhouse gas, R410A.
