## Notes:

1. Nominal cooling conditions (Test conditions are based on AHRI 1230)  
Indoor: 81°F D.B./66°F W.B. (27°C D.B./19°C W.B.), Inlet water temperature: 86°F (30°C)
2. Nominal heating conditions (Test conditions are based on AHRI 1230)  
Indoor: 68°F D.B. (20°C D.B.), Inlet water temperature: 68°F (20°C)
3. The sound values are sound power level (PWL) based on ISO 3744:2010 (r=3.5m).  
Test conditions: Indoor: 81°F D.B./66°F W.B. (27°C D.B./19°C W.B.), Inlet water temperature: 86°F (30°C)
4. 23°F EWT (Entering water temperature) is possible via DipSwitch Setting. Antifreeze (glycol) must be added to the water loop to prevent freezing down to 5°F
5. The ambient temperature of the Heat Source Unit is to be below 104°F D.B. (40°C D.B.)
6. The ambient relative humidity of the Heat Source Unit is to be below 80%.
7. The Heat Source Unit should not be installed at outdoor.
8. Use a strainer (more than 50 meshes) at the water inlet piping of the unit.
9. Provide interlocking for the unit operation and water circuit.
10. Install the supplied insulation material to the unused drain-socket.
11. When installing insulation material around both water and refrigerant piping, follow the installation manual.
12. The water circuit must be a closed circuit (water is not exposed to the atmosphere).
13. All electrical work shall comply with Nation (CEC) and local codes and regulations
14. Should this document be altered or changed without MESCA's permission, it becomes null and void. MESCA assumes no responsibility for any consequences in such cases.
15. Mitsubishi Electric (MESCA) supports the use of only MESCA supplied and approved accessories. Use of non-MESCA supported accessories will affect warranty coverage

Note 1. Connect the pipes as shown in the figure above. Refer to the table below for the pipe size.

2. Twinning pipe (High pressure) must be installed horizontally using a level vessel.

3. See the Installation Manual for the details of Twinning pipe installation.

4. Only use the Twinning pipe by Mitsubishi (optional parts).

5. Connect the heat source unit 1 with the Twinning pipe (Low pressure) (section "d" in the figure).

Unit: mm(in)

Note1.Close a hole of the water piping, the refrigerant piping, the power supply, and the control wiring and unused knockout holes with the putty etc. so as not to infiltrate rain water etc.(field erection work)

Note2.At the time of product shipment, the front side piping specification serves as the local drainage connection. When connecting on the rear side, please remove the rear side plug sealing corks, and attach a front side.

Note3.Take notice of service space as Fig.A. (In case of single installation, 600mm(23-5/8) or more of back space as front space makes easier access when servicing the unit from rear side.)

Note4.If water pipes or refrigerant pipes stretch upward, required space for service and maintenance due to

Replacement of control box is shown in Fig.B. Environmental condition for installation: -20~40°C(DB)(-4~104°F)

Note5.In case the temperature around the heat source unit has possibility to drop under 0°C(32°F), be careful for the following point to prevent the pipe burst by the water pipe freeze-up.

•Circulate the water all the time even if the heat source unit is not in operation.

•Drain the water from inside of the heat source unit when the heat source unit will not operate for a long term.

Note6.Ensure that the drain piping is downward with a pitch of more than 1/100. At brazing of pipes, wrap the refrigerant service valve with wet cloth and keep the temperature of refrigerant service valve under 120°C(248°F).
